

LONG TERM PAVEMENT PERFORMANCE PROGRAM DIRECTIVE

For The Technical Direction Of The LTPP Program

Program Area: Monitoring

Directive Number: SM-21

Date: February 17, 1997

Supersedes: n/a

Subject: Version 1.0 of MOBREF Software

Within 30 days of the effective date of this directive, MOBREF v1.0 software shall be installed and utilized on all computers used to collect Mobile data for LTPP Seasonal Monitoring Program. This program is being released for use by the RCOCs to perform measurements on the TDR calibration reference cable installed in a user specified port. This program is intended to be an aid in diagnosing problems with the TDR data collection system. The program should be used anytime an anomaly is encountered in the collection of data thought to be attributed to the CR10 measurement system, wiring within the Mobile Data Acquisition Unit, and/or connections with the cable tester. (Note: a draft of this program was distributed in 1996 under a memorandum from the North Atlantic RCOC dated April 19, 1996).

Installation instructions for the MOBREF v1.0 software are described in the North Atlantic RCOC's memorandum of January 21, 1997 titled LTPP MOBREF. Instructions on operating the software are also provided in this memorandum.

As always, if there are any questions concerning these modifications or any comments on the MOBREF software, please do not hesitate to call or submit a problem report form (SMPPR).
