

# LONG TERM PAVEMENT PERFORMANCE PROGRAM DIRECTIVE

For The Technical Direction Of The LTPP Program

**Program Area: Traffic Monitoring**                      **Directive Number: T-9**

**Date: February 27, 1998**                              **Supersedes: N/A**

**Subject: Upgrade of LTPP Metric Conversion Software to Version 3.0**

---

This new version of the LTPP Metric Conversion Software contains modifications made in response to feedback from the RCOCs. More specifically, the following enhancements were made in this software version:

- < Modified software to resolve the problem reported by Western RCOE staff (SPR W980002). The problem was as follows: when the station code contains numbers and letters in combination, the metric program converts the state station code to 000.
- < Modified software to resolve the problem reported by Western RCOE staff (SPR W980001). The problem was as follows: the metric conversion program could not handle the value "-1" for class 1 and class 3 of the vehicle classification records (c-card).

To install this program, create a subdirectory under METRIC called V3. Copy metricv3.exe to this subdirectory (METRIC/V3). To start the program from File Manager, double click on this file (metricv3.exe). The documentation "*Metric Conversion Software Program*" is still applicable to use with this version of the software. No data reprocessing is required with this program modification.

Please use the Software Performance Report (SPR) form to submit any problems identified with the software. Other questions concerning the software should be directed to Cindy Cornell-Martinez of the LTPP Technical Support Services Contractor (TSSC) Team at:

Chaparral Systems Corporation
